

# MATERIA

"Materia" is the upshot of an idea developed in Piemme for a new expression of ceramics, a **noble** material with a great creative history that rediscovers and relaunches its original inspiration and, thanks to its graphic technique, analyses the aesthetics of **different materials**, such as **metal, stone** and **ceramics** themselves, retaining the most interesting design phases and **merging** them **together** in something truly **new** and **unexplored**, for a new aesthetic synthesis, which actually originates a new material.

Even the decorative apparatus and the **3D structures** are designed specifically to emphasise this nature of fusion between materials thanks to the creativity of the noble ceramic material which, through "Materia", finds new lifeblood and a great personality which distinguishes it from any other ceramic surface on the market.
